## Kinesiology Taping Re-Invented

SpiderTech is a line of pre-engineered tape-based therapeutic supports developed to facilitate a functional medicine approach to pain modulation and myofascial dysfunction. Our re-invention of Kinesiology Tape methodologies, in the form of "pre-cut" applications, are designed for clinical use providing a standardization of Kinesiology tape treatment in a manner that increases treatment throughput.

SpiderTech "Ready to Apply" applications meet the needs of today's rehabilitative and performance enhancing professionals by providing a coupled, synergistic influence on pain reduction, injury prevention and performance enhancement called 3P.

- 1 Pain reduction via neural mechanisms which result in the restoration of normal position sense and muscle activation patterns.**
- 2 Prevention through re-establishing functional joint stability, enhancing the necessary natural healing mechanisms and through smooth controlled limitation of potentially harmful ranges of motion.**
- 3 Performance enhancement indirectly through decreased repetitive strain trauma, decreased onset of muscular fatigue and the reduced occurrence of muscle cramping.**

### Testimonial

As the Team Chiropractic Physician for the British Virgin Islands Olympic Committee and Track and Field events I would like to thank SpiderTech for giving my athletes the additional competitive edge during the Pan Am Junior Championships in Trinidad.

SpiderTech applications were able to decrease their pain and fit very well with their treatment regimen which included FAKTR-PM with Graston Technique, CMT, ice, stretching and exercise rehab. I was impressed with the athletes' enhanced post event recovery and the ability of the athletes to perform at such high levels throughout the event with overall less discomfort and strains.

What really amazed me was that the SpiderTech applications stayed on for multiple days even while it was pouring rain during the competition.

**Angela I. Salcedo DC, FICC**

## Testimonials

I am now 2 months post-op lumbar laminectomy / discectomy. My incision is over 6 inches long and I need some additional support when walking. Prior to the APTA sections meeting in Las Vegas, I was using a LS corset with a sacral pad for support, and this was helpful but bulky. Since most of my pain is myofascial, I decided to try the Spider Tech taping kits, and this was an instant success. It is so light it almost feels like your own skin, and you can wear it for few days at a time. Also, this taping applications help to decrease muscle spasms at night time. I will most definitely plan to use this multi functional product in the future.

**Sincerely, Michael Feely, RPT,  
SE Physical Therapy, PC,  
Portland, Oregon**

Going after the National Record in Women's Team Pursuit was a tall order. We trained really hard for this moment. Throughout all of my long and arduous training days, Spider Tech tape kept me loose, recovered and performing at my best for each and every workout. I even endured an injury leading up to the event on my left arch, and the Calf and Arch Spider kept me pain free while my injury healed and also greatly accelerated the healing process.

I could not have done this without my Spider Tech tape.

**Dotsie Bausch, Pan American Gold Medalist,  
6X National Champion (road and track), U.S. Women's Team Pursuit Record Holder**

As a pain medicine physician and Olympic team physician I applaud your research and innovation in advancing the technology of kinesiology taping. The Spider-Tech products have rapidly become our cutting edge modality implemented for patient pain/edema reduction and functional restoration with better adhesion, less skin irritation and easier application than prior products.

Congratulations on a phenomenal product!

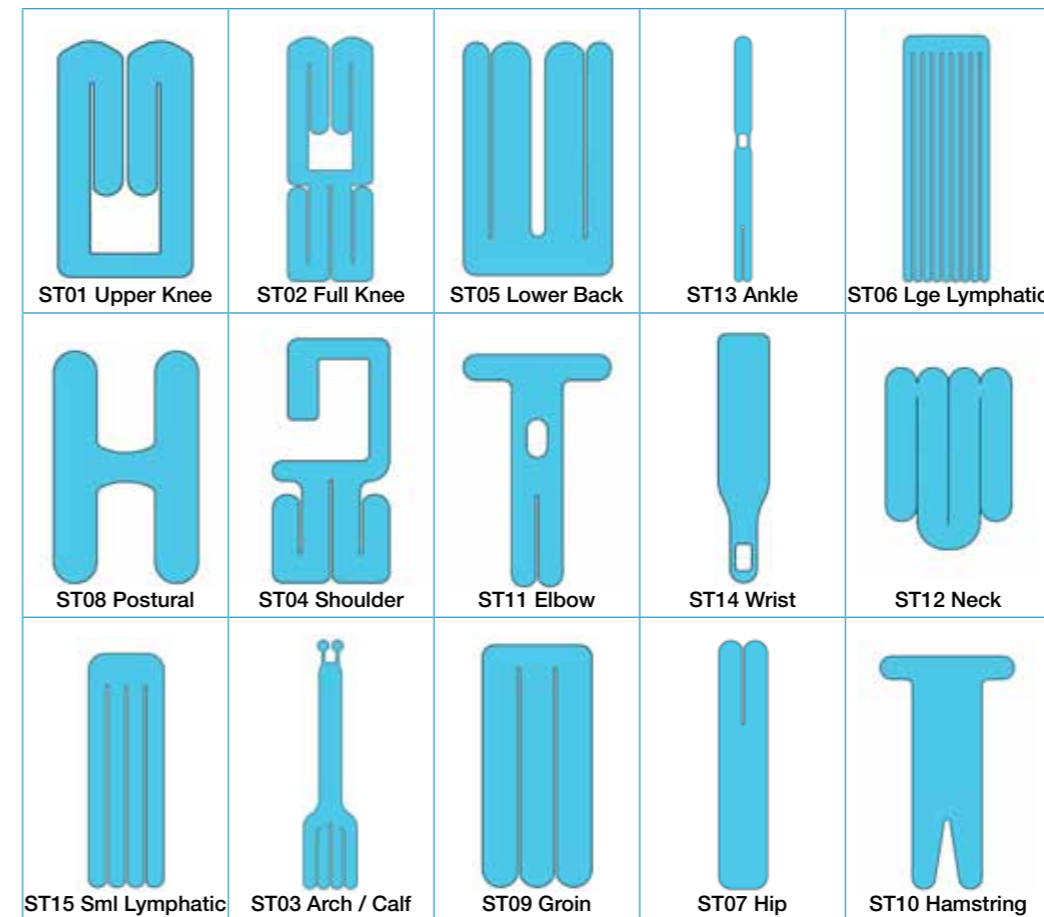

**Sincerely, Todd M Reiter, MD, DC**

## How does Spider Tech Kinesiology Taping work?

## Spider Tech Professional Line

### Pre-Cut and Ready to Apply

Manufactured using the proven tape products of Nitto Denko – manufacturers of the original Kinesiology Tape - SpiderTech is now a line of 16 pre-cut therapeutic and performance enhancing supports. The SpiderTech Professional line of product is the next evolution in the clinical use of kinesiology taping.

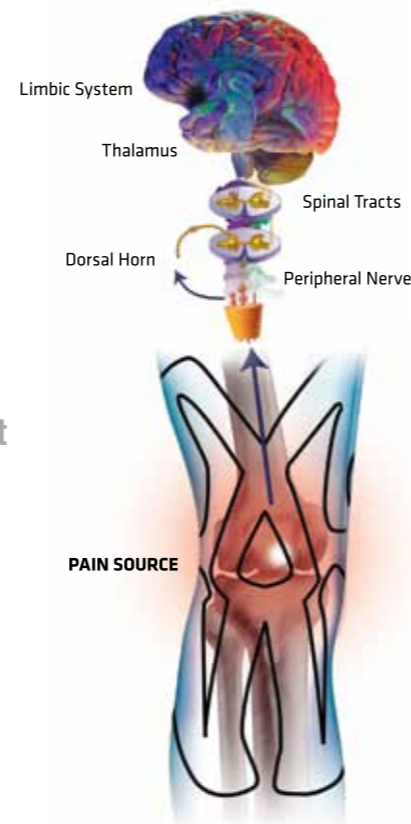

### Microcirculatory

- Wave pattern formation.
- Superficial fascial thixotrophy.
- Improved lymphatic flow.
- Improved superficial microcirculatory flow.

### The End Result

- Easy to use with faster more efficient application times.
- Improved clinical skill sets for the progressive therapist.
- Improved clinical outcomes
  - The patient is able to achieve early engagement in pain-free ranges of motion and strengthening exercises.
  - The patient becomes an active participant in the therapeutic process.
  - The patient is able to take the therapy home with them maintaining the treatment objectives between their treatments.

### PAIN CONTROL CENTER

How does it work? The tape, made with hypoallergenic acrylic glue, is manufactured to be the same weight, thickness and elasticity as the skin and is therefore able to integrate with the body's sensory system naturally. There are 3 possible categories of effect which have been identified depending on the method of application and the therapeutic outcome desired.

### Structurally

- Dynamically supports better postural positions.
- Prevent harmful ranges of motion with out a hard end feel.
- Reduce strain on affected muscle.

### Neurologically

- Enhanced sensory stimulation leading to decreased perception of pain.
- Restoration of normal muscle activation and function.
- Reinforces the restoration of functional stability.
- Promotes peripheral neuroplasticity.
- Stimulation of the skin's endogenous analgesic system.
